

Flow 800/800-R

High air exchange without sacrificing aesthetics and acoustics

High-performing and quiet, Flow800 is now updated and expands its family with new versions to respond in full to the needs of designers and customers.

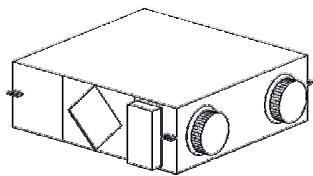

The range features new versions alongside the HRV unit, ideal for false ceiling applications, such as **Flow800 Steel**, where the HRV is natively integrated into a white painted steel cover for visible installations and suitable for ceiling and wall installations, **Flow800 Silent**, completed by a white wood cosmetic cover, for ceiling installations requiring **minimised aesthetic and acoustic impact of the HRV** and **FlowM800**, where the ventilation unit is made totally invisible by camouflaging it on

a white cabinet offering ease of integration in environments and great simplicity of access to the unit for inspections and filter changes. The airflow can be modulated over 6 values, from 300 m³/h (minimum speed in night mode) up to **800 m³/h** (maximum speed in hyperventilation), by means of the panel featuring Helty's standard user-friendly control interface. A control panel for recessed installation in 503 electrical boxes is also available as an accessory. The enthalpy heat exchanger ensures **80% heat exchange efficiency**, while the **dual Coarse 80% + ePM1 80% filter** stops approximately 90% of PM10 and 80% of PM2.5 by bringing oxygenated and purified air inside.

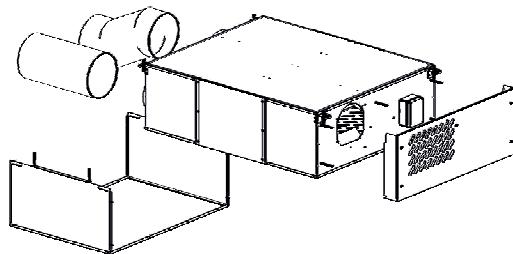

IAQ sensors and effective action against radon

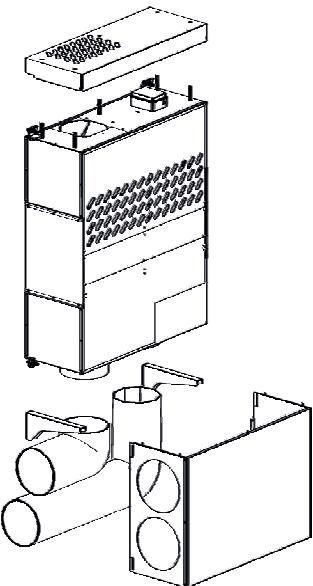

Flow800 is also available in a Pure version, with **hygrometric sensor and CO₂ and VOC** sensors that allow the HRV unit to monitor humidity and indoor pollutant parameters, automatically adjusting the air exchange as needed. The **Flow800-R** version is designed to restore **radon gas concentration to optimal values**, restoring healthy environments and helping to mitigate risk.
